

STANDARD DRAWINGS

PREFACE

These standard drawings have been developed and adopted by the Puerto Rico Highway and Transportation Authority for use in the construction of transportation facilities undertaken by the Authority. They are intended to improve the quality of the construction work by providing specific details and guidance.

These drawings provide standard details for use in the construction of various features included in highway and bridge projects. They are to be used in conjunction with the Authority's Highway Design Manual. Standard drawings from this book may be incorporated by reference in the construction plans for individual project.

The provisions of the Standard Specifications for Road and Bridge Construction, including the General Provisions, apply to these standard drawings and to the work covered by them. No changes to these drawings can be made without the approval of the Authority.

The Department wants to express its gratitude to all the consultants, contractors, suppliers, FHWA and PRHTA personnel who contributed with their knowledge and experience to the development of these standard drawings. Their contributions was invaluable to attain the technical and contractual quality that these drawings reflects.
